About this process

Phase 1 of the user housekeeping procedure. Lists all users, finds those who have not logged in for the configured number of days and – after you confirm the selection – adds them to a review group (e.g. mdsp_usergroup:AccessReview). Run "Access review 2" later to decide who keeps access.

Note: the last-login attribute lastLogonTime is returned by the Insights Hub user API but is not part of the official spec. Verify it with a dry run on your tenant and adjust the "Determine inactive users" step if needed.

Platforms used

Connection slot	Platform	Kind	Environment
`hub`	Insights Hub (demo)	`insights-hub`	demo

Inputs

Input	Value
Days without login (inactiveDays)	`90`
Review group (display name) (reviewGroup)	`mdsp_usergroup:AccessReview`
Include users that never logged in (includeNeverLoggedIn)	`true`
Exempt users (user names, one per line) (exempt)	`[]`

Results at a glance

9	0	2	0	1	0	1/1
Steps executed	Failed steps	Changes made	Simulated changes	Checks passed	Checks failed	Decisions

2. What was done

Every executed step in order, as recorded in the run journal.

Time	Step	Type	Status	Result
18:57:47	Start	`start`	Succeeded	Run started
18:57:47	Resolve API paths	`set`	Succeeded	idm = /api/identitymanagement/v3
18:57:47	List all users	`http`	Succeeded	GET /api/identitymanagement/v3/Users → 15 item(s) in 1 page(s)
18:57:47	Find review group	`http`	Succeeded	GET /api/identitymanagement/v3/Groups → 200 (3 ms)
18:57:47	Review group exists	`check`	Succeeded	✓ Review group mdsp_usergroup:AccessReview: found
18:57:47	Determine inactive users	`set`	Succeeded	group = {...}, alreadyFlagged = 0, inactive = [7 items]
18:57:47	Confirm users to flag	`userTask`	Succeeded	adam selected 2 of 7
18:57:47	Add selected users to review group	`forEach`	Succeeded	2 item(s)
18:57:47	Add to review group	`http`	Succeeded	POST /api/identitymanagement/v3/Groups/70c24e9e-f539-03a8-0699-b1596b7d46e3/members → 201 (14 ms)
18:57:47	Add to review group	`http`	Succeeded	POST /api/identitymanagement/v3/Groups/70c24e9e-f539-03a8-0699-b1596b7d46e3/members → 201 (3 ms)
18:57:47	Summary	`report`	Succeeded	Users flagged for access review: 2 row(s)

3. Changes (write operations)

Calls that create, change or delete data on a platform.

Time	Step	Method	Request	Result
18:57:47	Add to review group	`POST`	`http://127.0.0.1:35195/mock/ih/api/identitymanagement/v3/Groups/70c24e9e-f539-03a8-0699-b1596b7d46e3/members`	HTTP 201 · Succeeded
18:57:47	Add to review group	`POST`	`http://127.0.0.1:35195/mock/ih/api/identitymanagement/v3/Groups/70c24e9e-f539-03a8-0699-b1596b7d46e3/members`	HTTP 201 · Succeeded

4. Decisions and approvals

Selection: Flag 7 inactive user(s) for access review

OUTCOME
2 of 7 selected

DECIDED BY
Adam Approver (adam)

DECIDED AT
02/11/2026, 18:57:47 CET

ASSIGNED TO
Anyone allowed to run or approve the process

COMMENT
Checked with HR – both left the company

These users have not logged in for at least 90 days. Selected users will be added to mdsp_usergroup:AccessReview. Untick anyone who should be left alone.

Selected	User	Name	Last login	Days	Groups
✔	david.engel@example.com	David Engel	2026-07-30	95	mdsp:core:StandardUser, mdsp_usergroup:Operators, mdsp_usergroup:Viewers
✔	eva.fuchs@example.com	Eva Fuchs	2026-07-05	120	mdsp:core:StandardUser, mdsp_usergroup:Operators
–	felix.graf@example.com	Felix Graf	never	–	mdsp:core:StandardUser, mdsp:core:TenantAdmin, mdsp_usergroup:Engineers

5. Checks

Result	Check	Severity	Message
Passed	Review group exists	Error	Review group mdsp_usergroup:AccessReview: found

6. Results reported by the process

Users flagged for access review

- Users checked: 15
- Already in review group: 0
- Inactive candidates (>= 90 days): 7
- Flagged now: 2

User	Last login
david.engel@example.com	2026-07-30
eva.fuchs@example.com	2026-07-05

7. Evidence

No evidence files were recorded.

8. Errors

No errors were recorded.

9. Comments

10. Integrity and verification

JOURNAL INTEGRITY
Intact – unchanged since the run finished

SEALED PROTOCOL HASH (RECORDED WHEN THE RUN FINISHED)
`82703cba829b663a744e31b328b30b437461673797cba4553adfc74079d767b6`

PROTOCOL HASH AT REPORT GENERATION
`82703cba829b663a744e31b328b30b437461673797cba4553adfc74079d767b6`

REPORT CONTENT HASH
`1db74c88b906189bd34044fe6756868063f4bb4da48611007dc5743c66166eb2`

REPORT ID
`rpt_gUjRmUEcPZMk`

RUN ID
`run_KBxMofdOCXct`

How to verify this document

1. Compute the SHA-256 of this PDF file and compare it with the value in the audit log entry “report.generated” for report rpt_gUjRmUEcPZMk. Signing adds an incremental update: for a signed copy, hash only as many leading bytes as the size recorded in the same entry.

2. Verify the audit chain (Audit log → Verify chain, or GET /api/audit/verify). A valid chain proves that the recorded hash has not been altered.

3. The protocol hash printed in the footer is the sealed fingerprint of the run journal; the run page shows whether the journal is still intact.

Audit trail of this run

Entries of the HMAC-chained audit log for this run. Any later change to these entries is detected by “Verify chain”.

#	Time	Actor	Action	Summary	Entry hash
